

Syn-Vital

Probiotic Yeast Supplement

Improved feeding efficiency for an overall health boost.

Syn-Vital® is a yeast culture developed especially for animal nutrition. This dry bran supplement contains the yeast *Saccharomyces Cerevisiae*. During the natural fermentation process the yeast cells produce metabolic products including vitamins, organic acids, minerals and amino acids. The metabolites stimulate the growth of certain rumen bacteria. A real yeast culture consists of the yeast itself, the breeding ground on which the yeasts and the metabolites.

What does Syn-Vital do?

Through improvement of the taste and digestibility of the feed ration, Syn-Vital leads to an:

- Increase of rumen activity and feed absorption
- Increase in lactic acid processing microbes
- Improves feed efficiency

Health & Nutrition

Good Nutrition creates a solid foundation for success. Microbial based products from Agriton UK are tested for effectivity and based on scientific innovation providing nutritional support needed to optimise rumen performance. Improved rumen function, translates into healthy animals, performing to their potential.

Research has shown that yeast based products support:

- Dry Matter Intake and Digestibility
- Milk Production
- Overall health

Syn-Vital can be used 365 days of the year supporting your animals nutrition.

"After day 10 our milk yeild steadily increased with no change to the ration apart from the introduction of Syn-Vital. We have now seen an increase of 1.6l of milk in our fourth week." Mr. P. Phillips, East Lane-scott Farm

Feeding Syn-Vital can show an increase of up to 1.8 Ltrs of milk within a few days!

AGRITON

"I used Proferm with my stallion who suffers from gastrointestinal problems and saw an immediate positive effect. Even after colic my mare recovered faster. I have the impression that the horses eat better; probably due to the strong aroma". Rosie Moss (International show jumper from the United Kingdom).

Syn-Vital

Proferm

THE PRE AND PROBIOTICS FOR THE INTESTINAL FLORA

Proferm is a feed additive produced through a fermentative process with Effective micro-organisms and spelt bran. Syn-Vital is a feed additive made in the same way using wheat bran. Proferm and Syn-Vital strengthens the intestinal flora and provides the necessary fibres for the intestinal flora. This synergy of good bacteria and fibres stimulates the intestinal flora positively. This results in improved digestion and uptake of nutrients that then leads to a reduction in fodder costs. Moreover, the animals get a beautiful healthy coat and moults quicker. The general condition and resilience of the animal increases with improved performance seen after just a few days.

Probiotics provide advantages to boost animal health and also function as good bacteria cultures in the animals gut. These stimulate the activity of the intestinal microflora. Prebiotics are nutrient fibres that promote the growth of bacteria in the digestive tract. Yeasts form vitamin B and other substances and can improve the microbial fermentation and digestion of fibres.

Syn-Vital and Proferm are approved and registered under the EU animal feed legislation.

BENEFITS

- Helps restore intestinal flora after diarrhoea.
- Increases palatability, feed intake and digestion.
- Improves the general condition and immunity.
- Can be mixed with standard horse feeds.

APPLICATION

50g / horse / day.
